Subject: Other Databases

Jon – There other databases besides EPA’s STORET database that should be searched. These include the following:

- ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ NWIS (USGS National Water Information System database) - This database includes not only USGS data but combines data from other sources including EPA. I have not used this database but I tried to access it and it requires some knowledge as to how USGS set up some of the parameters. Not all are intuitive or come with drop-down boxes. Unfortunately, one of our key database people here at EPA that is familiar with NWIS is out next week as well so unless there is someone in CB&I who is familiar with how this system works, we can’t help you until the week of June 1st. But I do think this database will be worth checking out.

- ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ SCRIBE – another EPA database that includes quite a bit (all?) of Superfund data collected for the Upper Animas as well as data from the USGS PP 1651 and some (all?) of the data collected for the Use Attainability Analysis (UAA) by ARSG – Animas River Stakeholder’s Group. I know that we allow anyone to access SCRIBE – contractors, etc. but I am not familiar with how to access it and if we need to give a “permission slip”. I will need to send another email to the “care taker” of that database and request access/link for USACE & CB&I. I think that person will be available next week.

- ☐ ☐ ☐ ☐ ☐ ☐ ☐ ☐ AWQMS – WQ data can be loaded into this database prior to it being loaded into STORET. Karl Herman (1st email today) knows more about that but Karl isn’t available next week so if we decide to search this database that will have to wait until the week of June 1st.

I will send you the UAA and a link to the USGS PP 1651 in my next email. Stay tuned.
